How can known structures lead into relationships and observation?

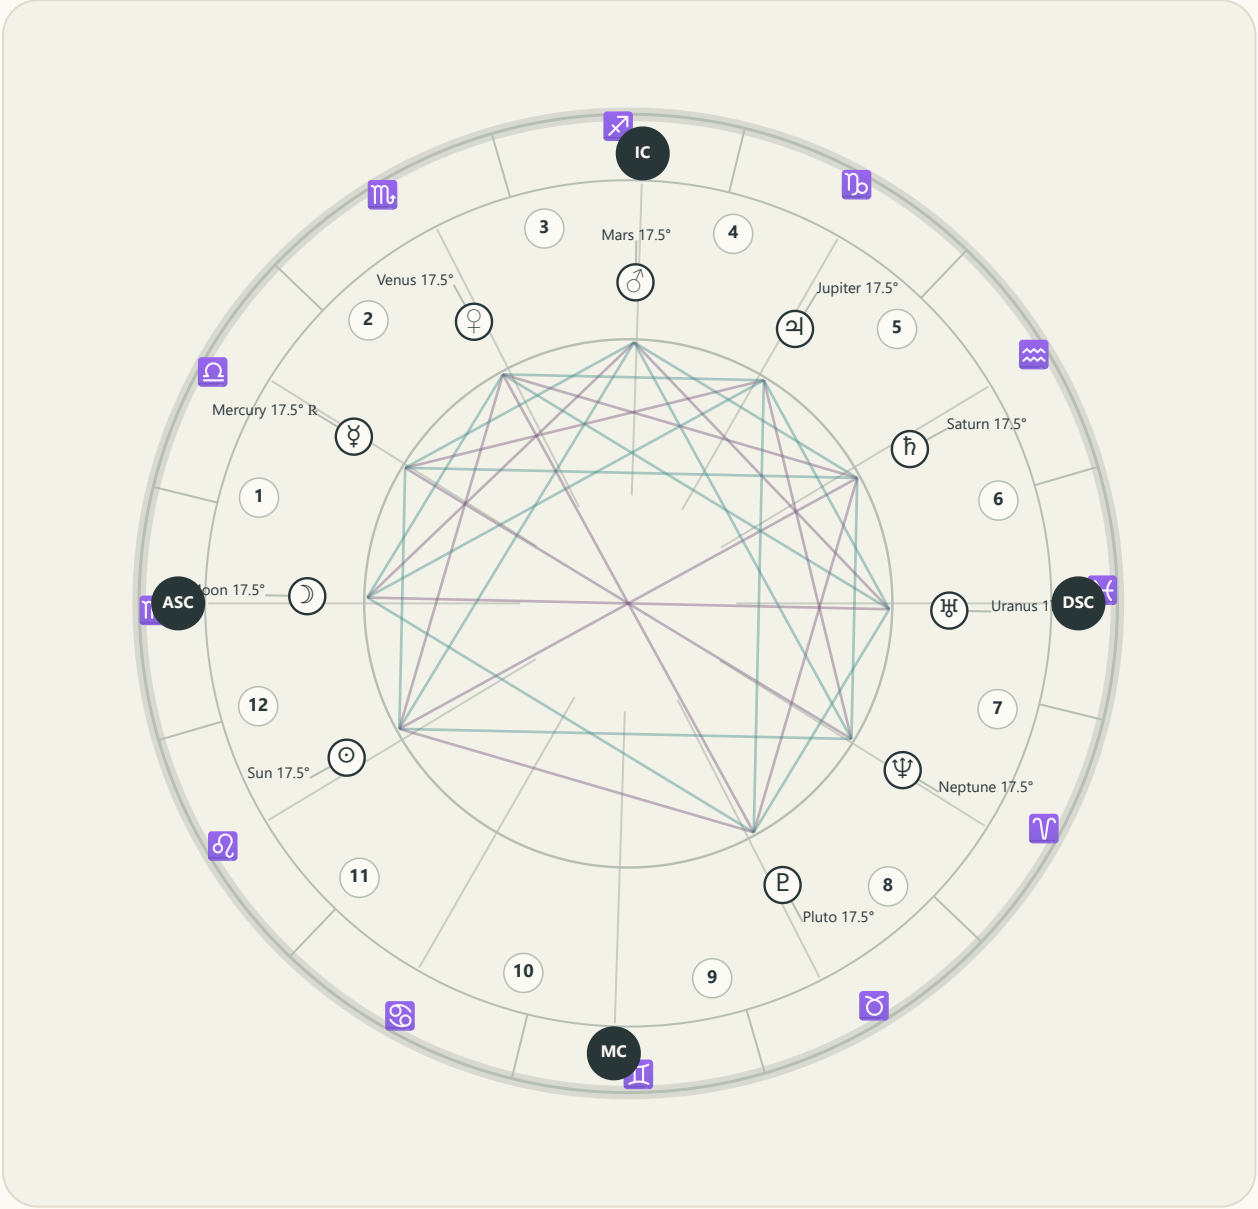

ASTROLOGY

PHI OS · REPORTS

Your natal chart

How is the whole chart organized?

Element distribution

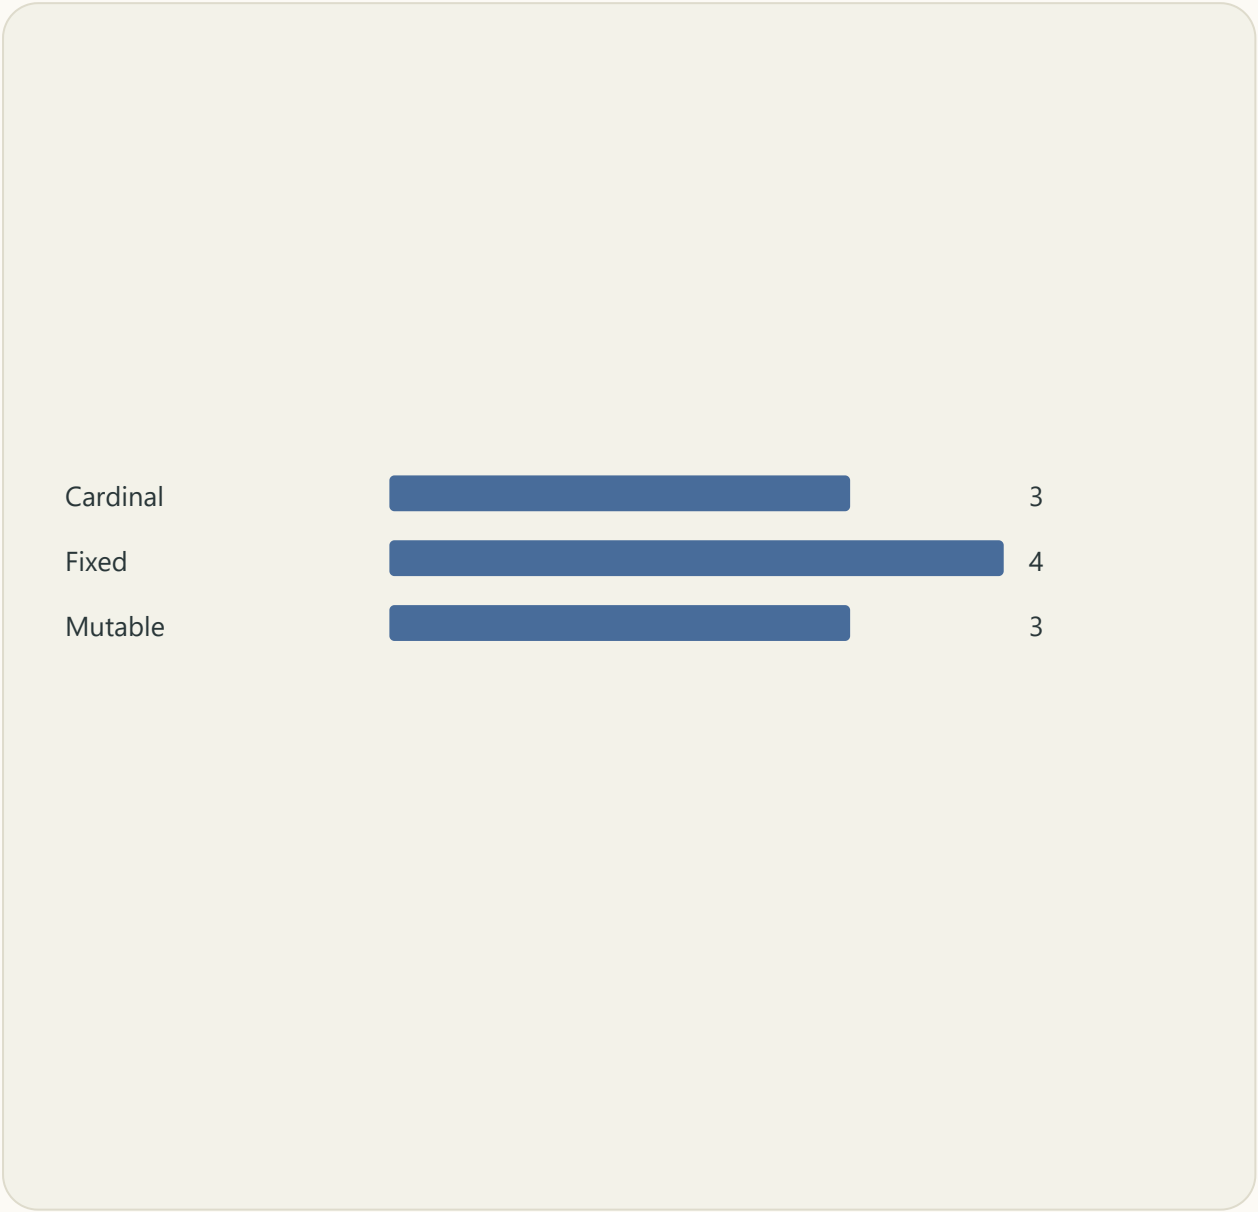

What does the unweighted planet count show?

Unweighted counts are structural distribution, not a personality strength score.

Modality distribution

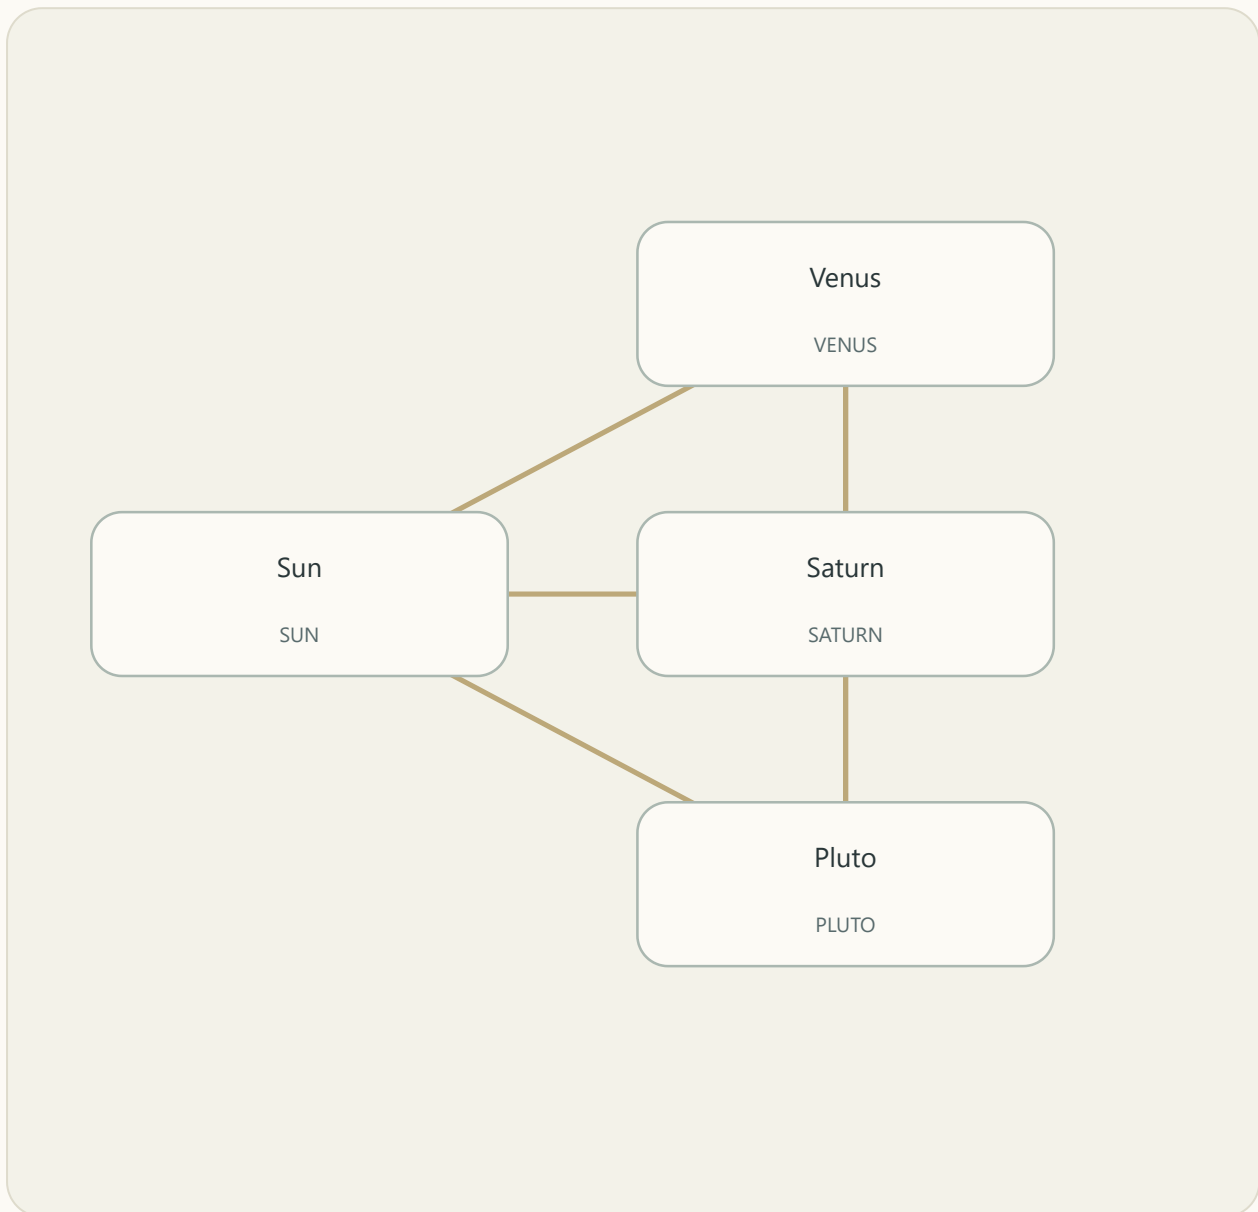

What does the unweighted planet count show?

Unweighted counts are structural distribution, not a personality strength score.

Several chart functions form a high-tension network

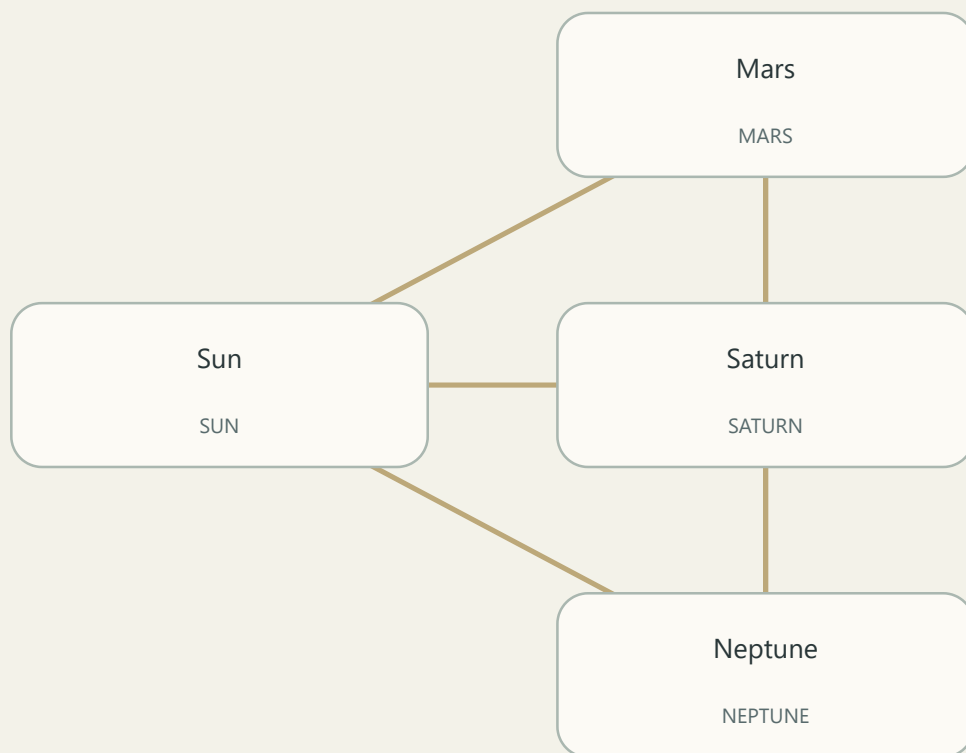

Which governed connections support this theme?

Sun, Venus, Saturn, and Pluto form a closed high-tension network. The reading keeps the interaction among several chart functions visible without turning the geometry into a good/bad or destiny verdict.

A supportive network is focused by an opposing axis

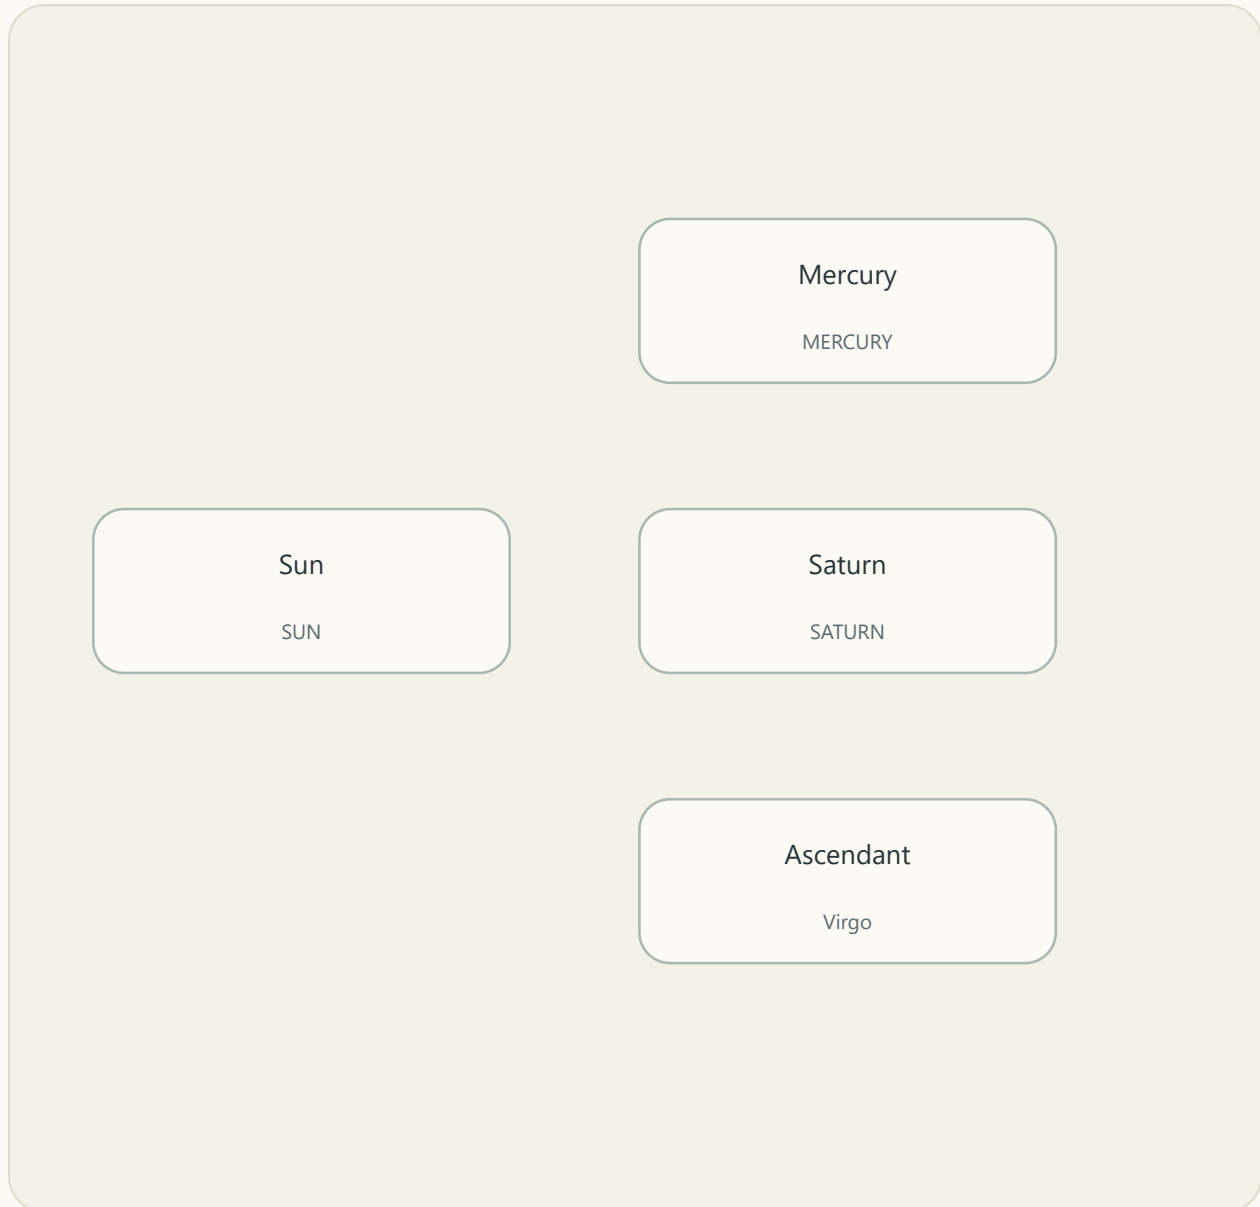

Which governed connections support this theme?

Sun, Mars, Saturn, and Neptune form a supportive network focused by an opposing axis. This describes how the geometry is concentrated without turning it into a guaranteed opportunity or achievement.

Many chart pathways run through Mercury

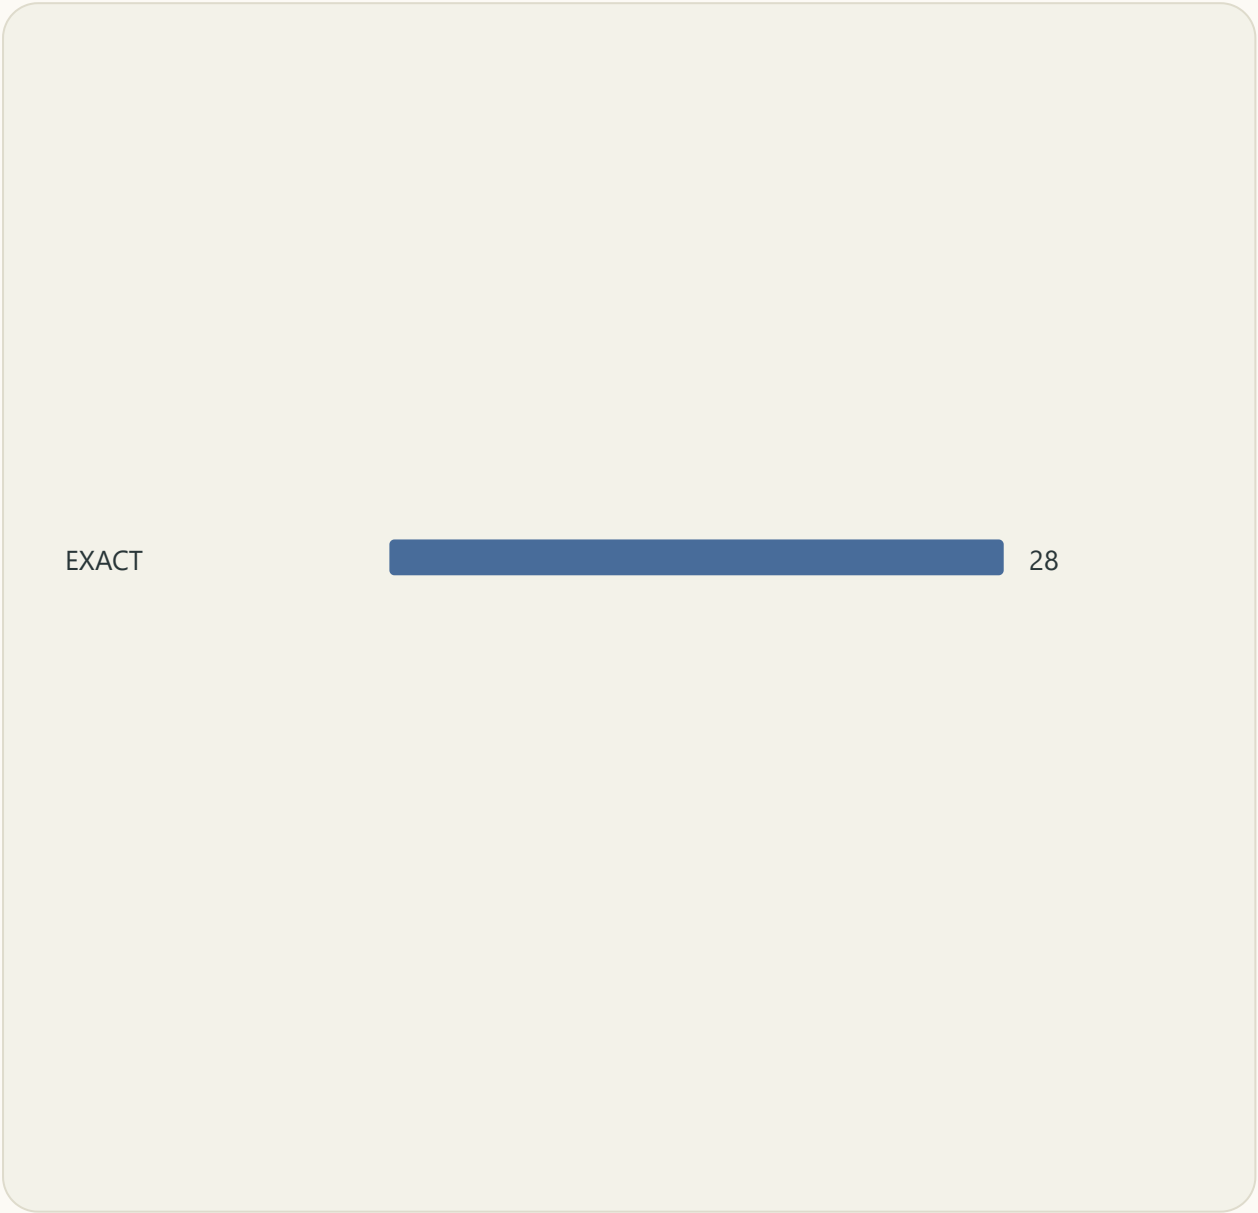

Which governed connections support this theme?

As ruler of the Ascendant sign, Mercury becomes an important routing reference for the chart. The dispositor network also links through Saturn and Sun; this describes structural routing rather than making any planet a total personality label or fate controller.

The aspect network carries different degrees of movement

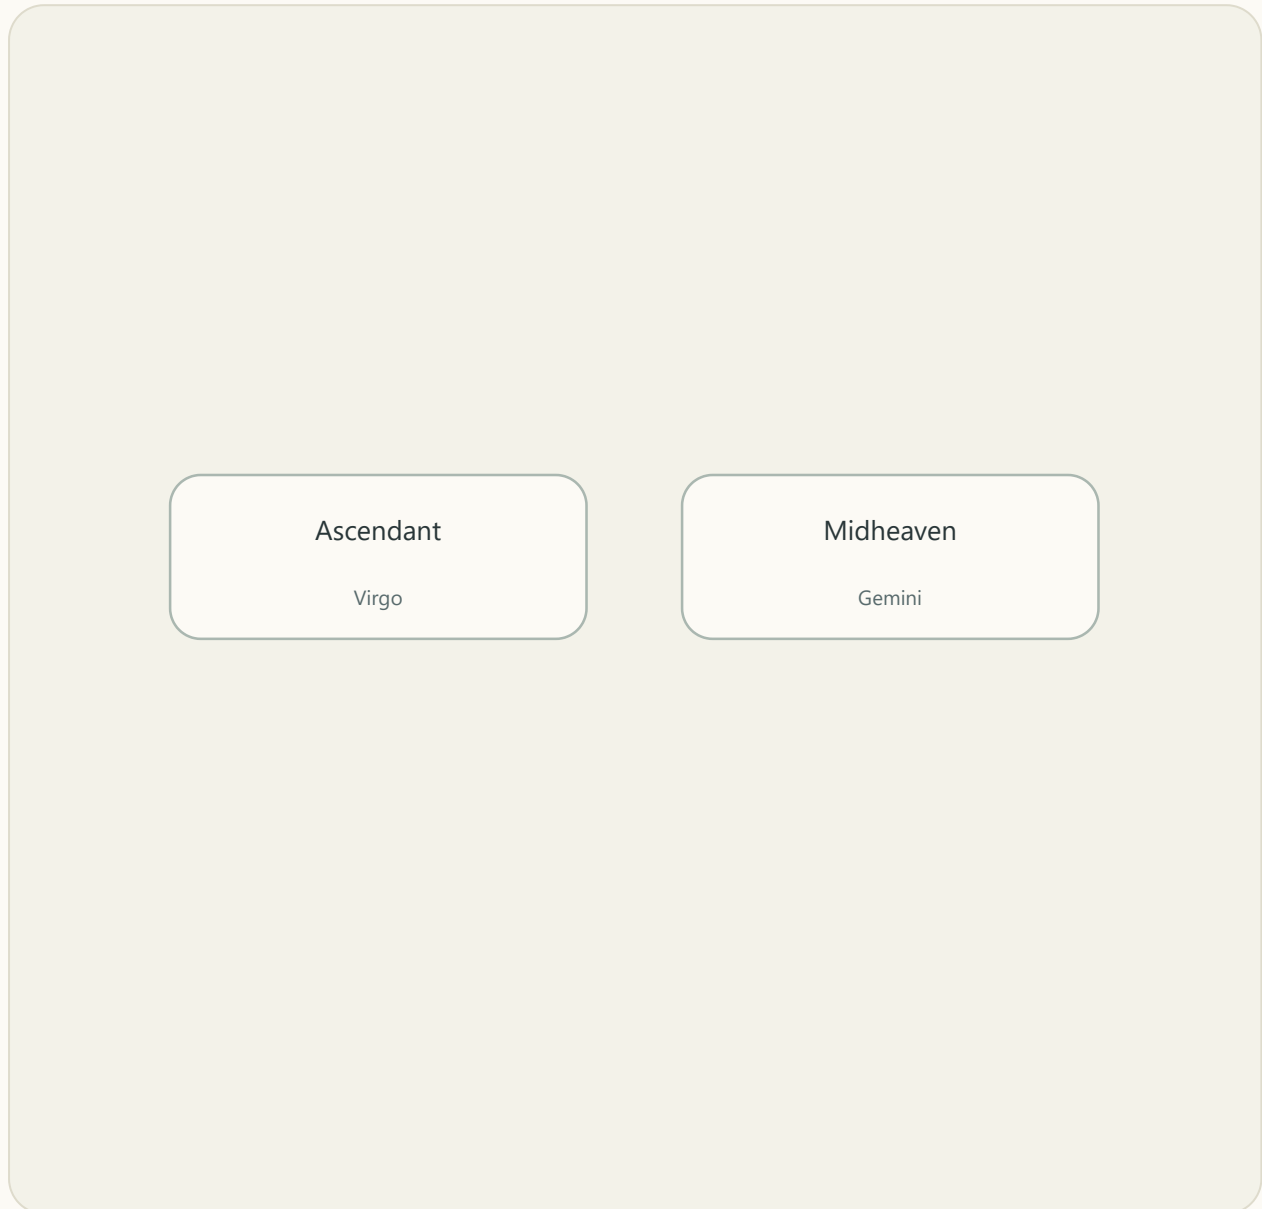

What are the source aspect movement states?

At the birth moment, 0 aspect links are moving closer to exact, 0 are moving away, and 28 sit within the exact tolerance. This classifies the geometry at that moment; it is not an event forecast.

The horizon and public axis frame how the chart is oriented

Which governed connections support this theme?

The Ascendant falls in Virgo and the Midheaven in Gemini. Together they frame how the chart meets immediate situations and how public direction becomes visible, without establishing a fixed identity or career outcome.

Functions in their life domains

Where does each source function enter everyday life?

Sun · House 12

Central organization · Background processes and withdrawal

Moon · House 1

Adaptive regulation · Entry and embodied interface

Mercury · House 1

Information coordination · Entry and embodied interface

Venus · House 2

Valuation and attraction · Resources and retained value

Mars · House 3

Mobilization and boundary action · Local exchange and learning

Functions in their life domains

Where does each source function enter everyday life?

Jupiter · House 5

Expansion and synthesis · Creation and expressive output

Saturn · House 6

Constraint and durability · Maintenance and daily operation

Uranus · House 7

Discontinuity and variation · Counterpart and one-to-one relation

Neptune · House 7

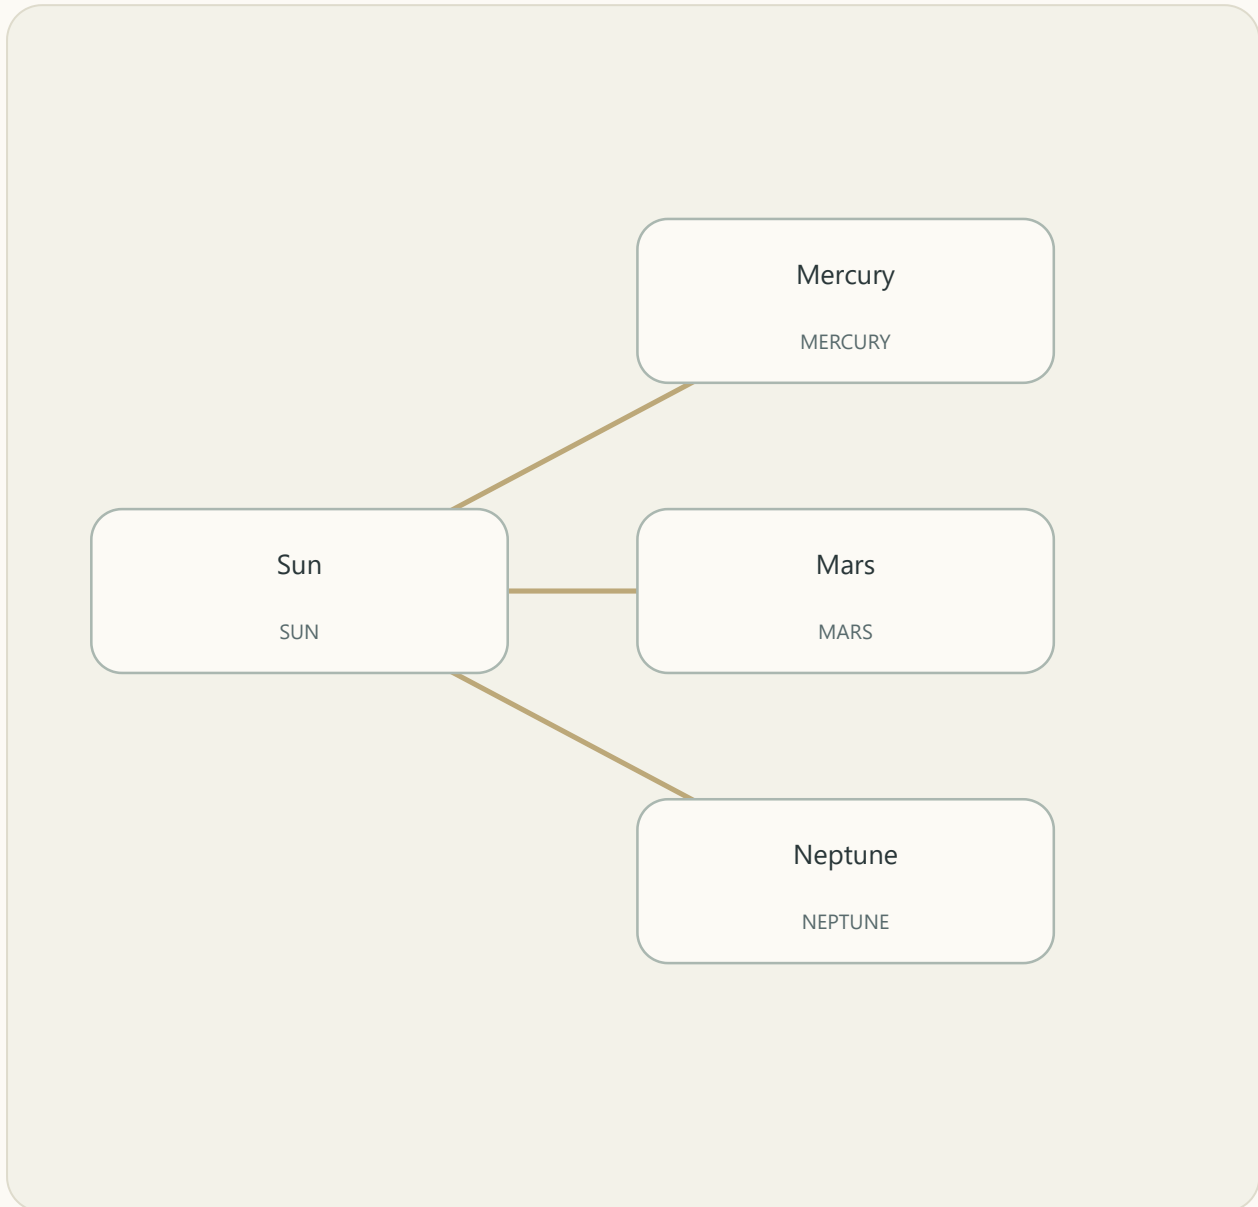

Diffusion and permeability · Counterpart and one-to-one relation

Pluto · House 8

Deep restructuring · Shared dependency and transformation

Support connections

Which connections carry this reading?

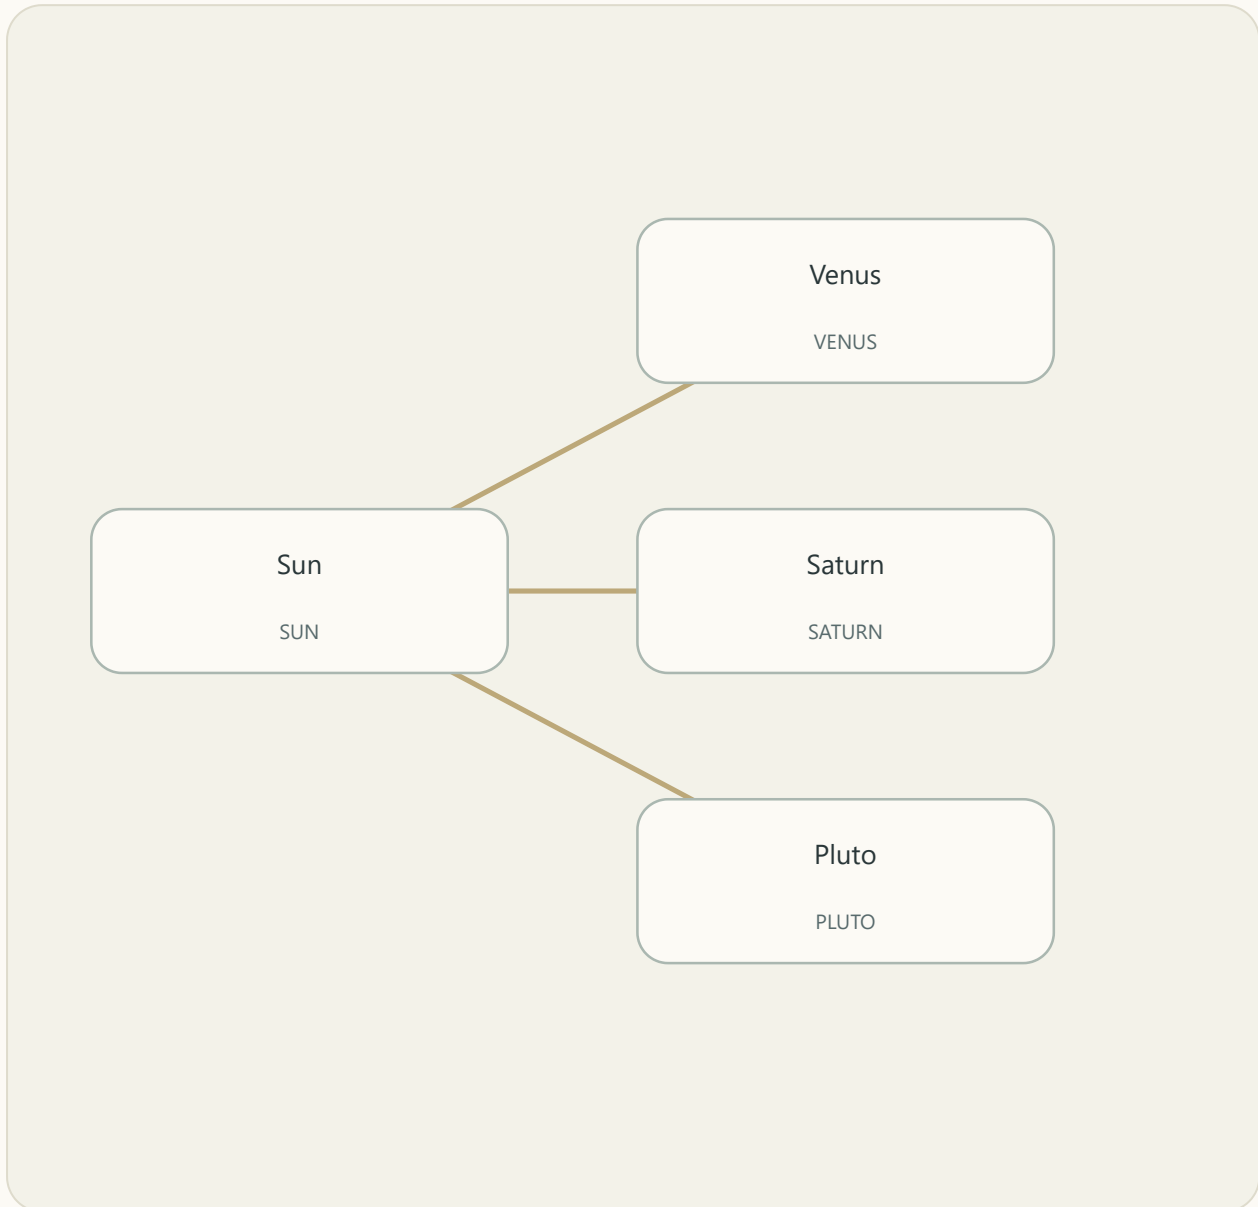

Sun and Mercury connect through a supportive link.

Sun and Mars connect through a lower-friction link.

Sun and Neptune connect through a lower-friction link.

Tension connections

Which connections carry this reading?

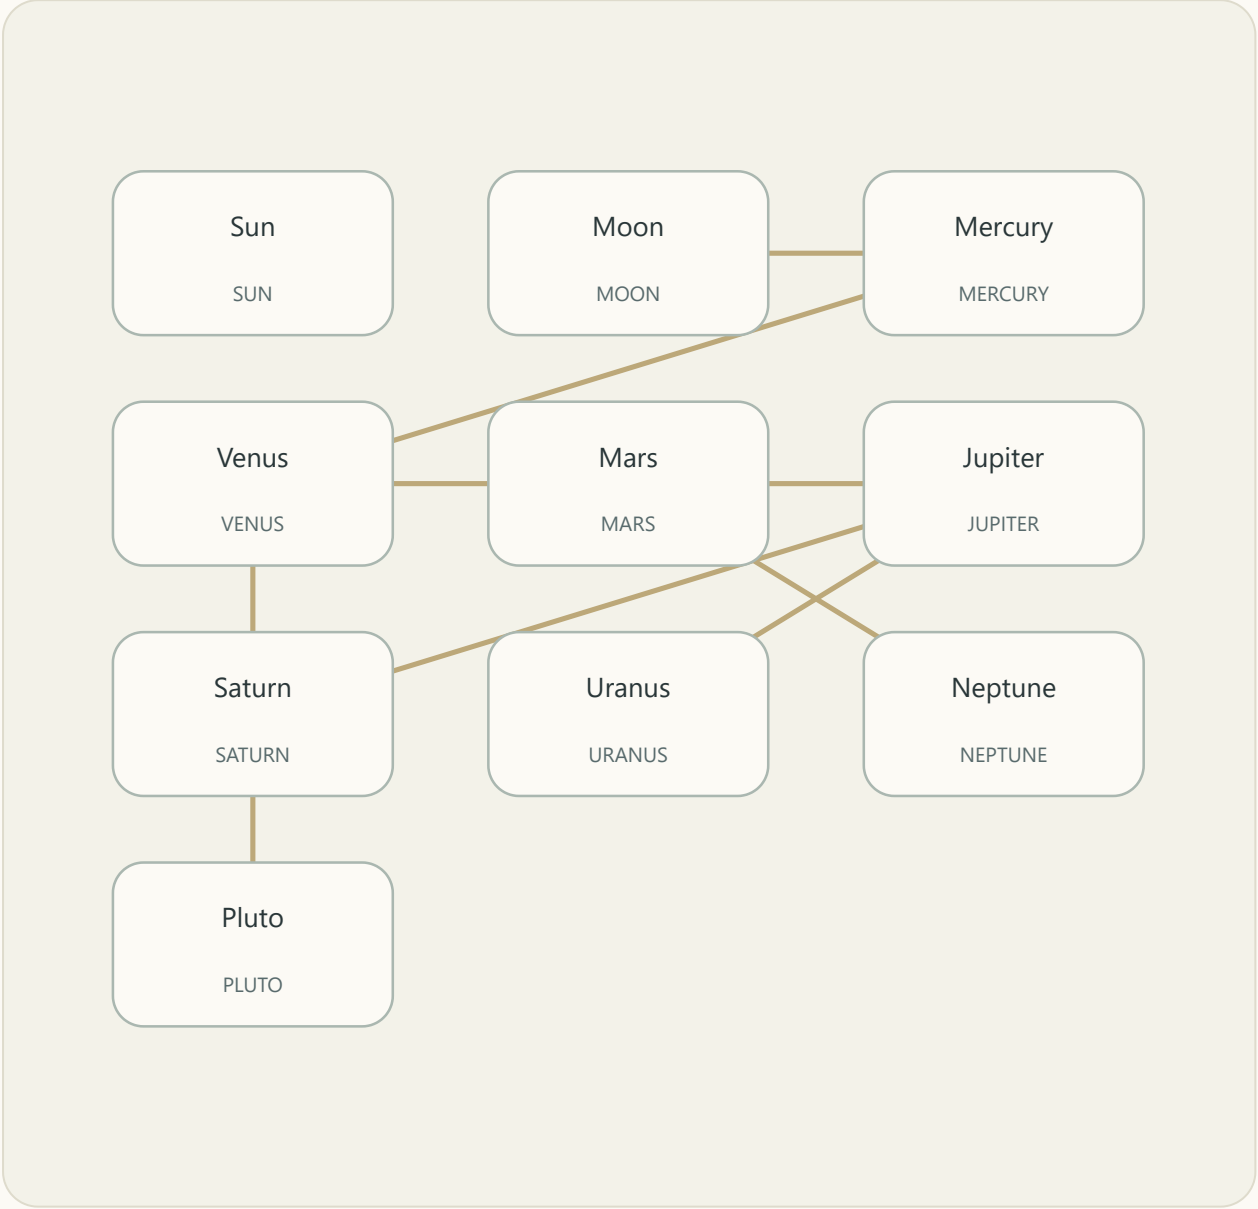

Sun and Venus meet through a friction-bearing link.

Sun and Saturn hold a polarity across the chart.

Sun and Pluto meet through a friction-bearing link.

Rulership routes

Where do the existing dispositor routes lead?

Traditional seven-planet primary rulership. Modern outer-planet rulers remain annotations.
